A paragraph before the first heading.

Editor sample

Every paragraph and every list item is a block. Alt+↑/↓ moves the block with the cursor, Shift+↑/↓ selects block by block, and Cmd+Shift+M shows the Markdown.

Lists

Below are different lists

Bullet

- A bullet item
- A bullet item long enough to wrap onto a second line, so that its further lines start where its text starts and not under the bullet
  - A nested item: Tab nests an item, Shift+Tab moves it back out
  - Alt+↑/↓ moves a nested item among its siblings and into the item next to it
- A third item
  with a second line, written with Shift+Enter

Numbered

1. Numbered items count again after every move
2. Second item
   1. A nested numbered list counts from 1
   2. Its second item
3. Third item

☐ A task

☑ A done task

Quotes

> Tab on a paragraph makes it a quote.

> > Tab again quotes it one level deeper, Backspace where its text starts takes one level

> > off, and Enter starts a new paragraph after it.

A paragraph after the quotes.

Typing

Type # or - at the start of a line: it becomes a heading or a list once the space follows. With Literal on, Markdown typed in stays as typed.

Ideas

Last paragraph.
